Vibration Isolation

Features:

- ❖ Spring elements and brackets are powder coated
- ❖ Load plates are bright zinc plated
- ❖ Isolation hangers have a typical overload of 50%
- ❖ Isolation hangers have a minimum spring stability k_x/k_y ratio of 1.0
- ❖ Spring elements are safe at solid loading without it yielding and taking a permanent set, even with small amplitudes of excitation around overload conditions
- ❖ Hanger brackets will carry (5) times overload without failure
- ❖ Hanger brackets will allow 30° rod misalignment from isolated portion to fixed portion without short circuiting
- ❖ Isolation hangers marked K050* include a neoprene cup at the bottom of the spring coil, fitted to prevent the metal to metal contact. Larger diameter coils are provided with larger clearance holes in the bracket which ensures a proper air gap
- ❖ Patented "No Short" step cap component are used to ensure the lower (isolated) hanger rod remains centered on the isolator coil. Smaller diameter rods may be fitted with a washer on concentric depressions which automatically centers the hanger rod on the coil, regardless of hanger rod diameter.
- ❖ Vibration isolation used only for overhead mounting
- ❖ Vibration isolation hangers and spring elements are field assembled and installed
- ❖ 1 year warranty
- ❖ Freight not included
- ❖ Proudly Made in the USA

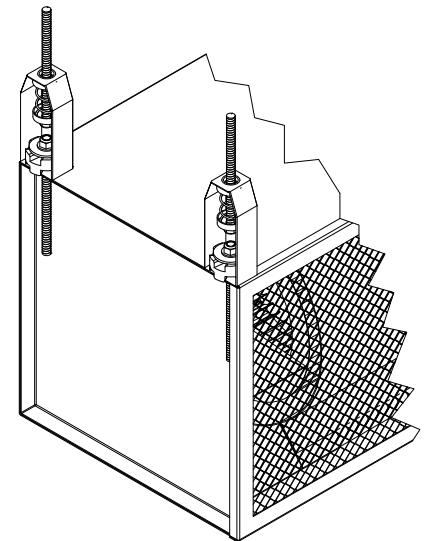

Options and Accessories: (see Accessories Brochure)

- ❖ Custom Vibration Isolation enclosures available (Obsidian Black, Titanium Silver, 304 SS)
- ❖ Factory mounting available (contact factory)

Commercial Spring Assembly

Industrial Spring Assembly
